

Mrs. Snure's Sophomore and Junior PreAp Algebra class implemented a project of their interest over any topic that could make a connection to Math. Students were required to interview an expert in the field of their topic, create a website, create a product, and keep a log book. The students then presented their project to the 8th grade students.

Characteristics exhibited by the students were a strong sense of self, passion and determination, resourcefulness, innovation, and hard work. They were able to discern and synthesize information and use technology as a tool to accomplish tasks and be life-long learners. They were effective communicators by problem solving and setting and achieving goals.
