

Mrs. Snure's Sophomore PreAP Algebra II class has been busy creating a 'Choose Your Own Adventure Story' that incorporated solving absolute value equations and inequalities into the choices the reader made. Their stories were built with google forms and they were required to have a peer evaluate their work and revise their story before submitting their final project.

They exhibited several characteristics of a Portrait of a Bronco, which included using technology as a tool to accomplish tasks and being a life-long learner. They also were problem solvers, collaborators, and were able to set and achieve goals. They were also resourceful, innovative, and worked hard on their project.
